

AGRICULTURE LOOP CARD GAME

primary students

HOW TO PLAY

Distribute the cards to students – there are 34 cards if you have more than 34 students team some students up, if you have fewer than 34 give some students more than one card. All cards need to be in play or the loop cannot be completed.

Choose a student to begin the game. Have them read their question and the student with the correct answer says 'I have XYZ' and then reads their question. Note: the answers on each card do NOT match, the challenge is to find the answer on a different card.

Continue until all questions have been asked. The aim is for students to improve on the previous time it took to find the correct answer for each question. This will occur as their recall of facts improves.

The correct answers are below ... just in case!

Question	Answer
What is a farmer who runs livestock/animals on their farm called?	Grazier
What are the plants grown on farms to make food and fibre products called?	Crops
What type of animal would you find on a beef farm?	Cattle or cows
