

A large, stylized green outline of a fish is positioned in the upper center of the slide. The background is a solid blue color with a repeating pattern of smaller, lighter blue fish outlines. At the bottom of the slide, there are several wavy lines in shades of blue and green, suggesting water or a horizon.

The Monnow Fisheries Association was formed to bring together those who had an interest in protecting the river Monnow and restoring it to its former status as "one of the best troutling rivers on the border or beyond it" (A.G.Bradley - In the March & Borderland of Wales).

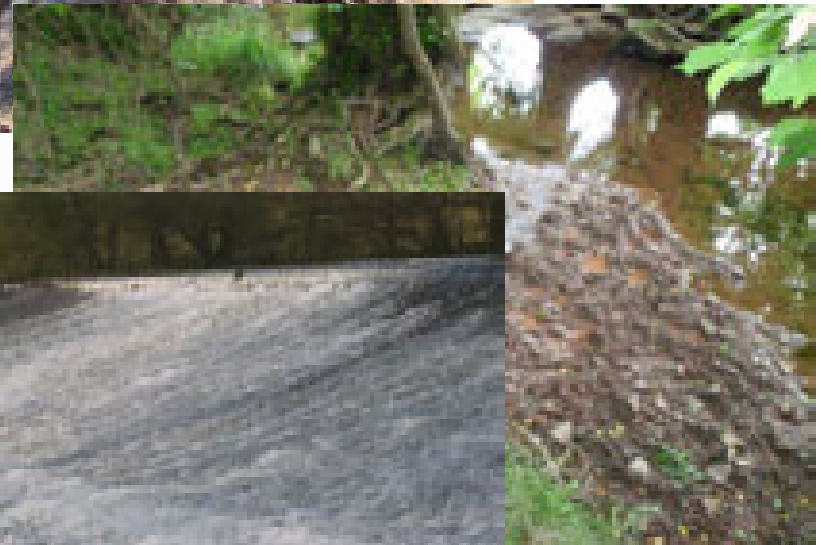

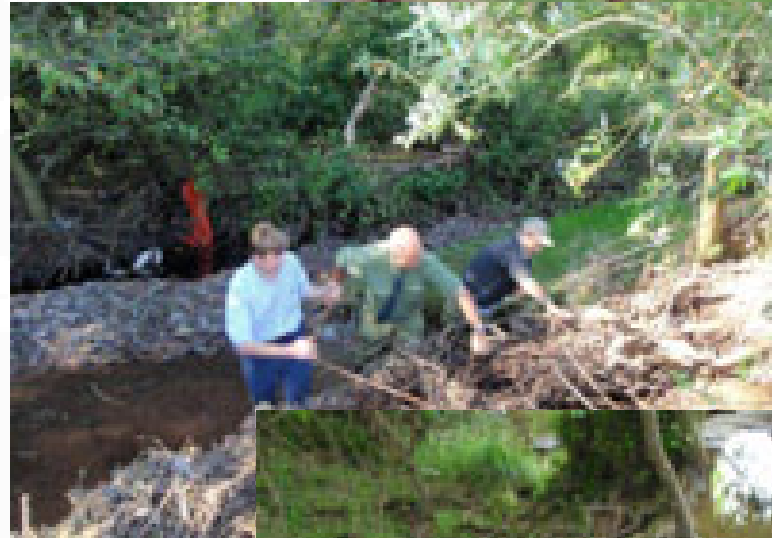

Through a series of projects aimed at improving the productivity and holding capacity of the river by the creation of increased good habitat for all life stages of the brown trout, we are already well on the way to reversing the damage suffered over the last few

decades. Such works of course also benefit a wide range of other important species such as otters, native crayfish and water voles. There remains a great deal of work to do and we appeal to all those that gain pleasure from the Monnow to join us in our struggle, [join our association](#) and help us make a difference.

Forming, for much of its length, the border between Herefordshire and Monmouthshire, the Monnow Valley is not only rich in historical features but is also arguably one of the most beautiful valleys in either England or Wales.

TU in Action

Black Canyon settlement goes into effect

The rebirth of a Colorado river begins this month, as water officials start to put the landmark 2008 Black Canyon of the Gunnison settlement into effect. "After years of hard work by TU and other conservation groups, this is the payoff," said Drew Petercoli, director of TU's Colorado Water Project. "With these removed flows, the Gunnison River in the Black Canyon will experience a rebirth." [Read more](#)

Sportsmen make the difference for Wyoming Range

For years, Trout Unlimited worked from the middle to bring all interested parties into the discussion to protect the Wyoming Range. As Chasana Stephenson of the Wyoming Tribune-Sage points out, it was the Western sportsman, speaking from the middle, that made the most difference in getting the act passed. [Read more](#)

Vote online, daily, to get \$50,000 for Whychus Creek

Vote online daily to help the National Forest Foundation secure \$50,000 for restoration and trails in Oregon's Deschutes River Basin. Whychus Creek is an Upper Deschutes tributary, and an important part of TU's core Upper Deschutes

Partnership!

This is what the National Fish Habitat Action Plan is all about — locally-driven efforts that build private and public partnerships to improve fish habitat.

Fish Habitat Action Plan partnerships are self-identified, self-organized, and self-directed communities of interest formed around geographic areas, keystone species, or system types.

NATIONAL
FISH HABITAT
ACTION PLAN

Action Plan Goals:

By 2010 the National Fish Habitat Action Plan will:

- Assess the condition of all fish habitats in the United States.
- Prepare a Status of Fish Habitats in the United States Report.
- Establish 12 or more Fish Habitat Partnerships in priority areas.
- Fund projects to protect, restore, and enhance priority habitats.

By 2015 the Action Plan will:

- Protect all healthy and intact fish habitats.

By 2020 the Action Plan will:

- Improve the condition of 90% of priority habitats and species targeted by Fish Habitat Partners.

Thank you for your time.

Any questions?
